### **Cal OES INLAND REGION**

#### **One Locomotive Derailment, Tracy, San Joaquin County: Hazardous Materials Spill Report #18-3392**

On 05/25/18 at 1638 hours, Union Pacific Railroad (UPRR) reported that one locomotive derailed in the upright position on an industrial line.

- One set of wheels derailed
- There was no hazardous materials release and no injuries to crew reported
- The cause of the incident is being investigated as vandalism to a switch
- Re-railing is complete at the train has departed the area
- CSWC personnel performed notifications per Standard Operating Procedures (SOPs)

### **Cal OES SOUTHERN REGION**

#### **Two Car Derailment, Imperial, Imperial County: Hazardous Materials Spill Report #18-3375**

On 05/25/18 at 0812 hours, Union Pacific Railroad (UPRR) reported that two cars derailed due to unknown reasons.

As of 1715 hours, UPRR reports that there was no hazmat release due to this incident.

- The two cars that derailed were empty hopper cars
- Last known contents was limestone and there was no release
- The incident occurred at a customer's facility and the third party customer is coordinating the re-railing of the cars
- CSWC personnel performed notifications per Standard Operating Procedures (SOPs)

# **SITUATION SUMMARY**

## **Cal OES SOUTHERN REGION – cont.**

### **Virulent Newcastle Disease (vND) in Chickens, Los Angeles and San Bernardino Counties**

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (vND) in chickens in Los Angeles and San Bernardino Counties.

- CDFA and the U.S. Department of Agriculture (USDA) is scaling up their response to this incident as more cases have been detected.
- CDFA has confirmed that there are no commercial premises currently involved.
- [CDFA has confirmed there is no public health risk due to this virus.](#)
- Cal OES Southern Region is assisting CDFA in identifying a facility to expand operations as the current Incident Command Post (ICP) is too small for the current number of responders and supplies

### **Activations**

- [San Bernardino Operational Area \(OA\) Emergency Operations Center \(EOC\) is activated to Level 3 \(lowest level\) and will monitor the incident through the holiday weekend](#)

### **Deployment**

- [Cal OES Southern Region Senior Emergency Services Coordinator\( Sr. ESC\) Sonia Brown has deployed to the CDFA/USDA ICP as an Agency Representative \(AREP\).](#)

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

A Pacific low pressure system continues to pass over Northern California today with widespread rain and scattered embedded thunderstorms. The low will move into the Great Basin tonight and a drier NW-N flow pattern will begin move develop in our northwestern areas tonight as high pressure begins to build in from the west. Showers and thunderstorms will linger in our eastern areas Saturday as a drying and warming trend starts west of the Cascade-Sierra crest.

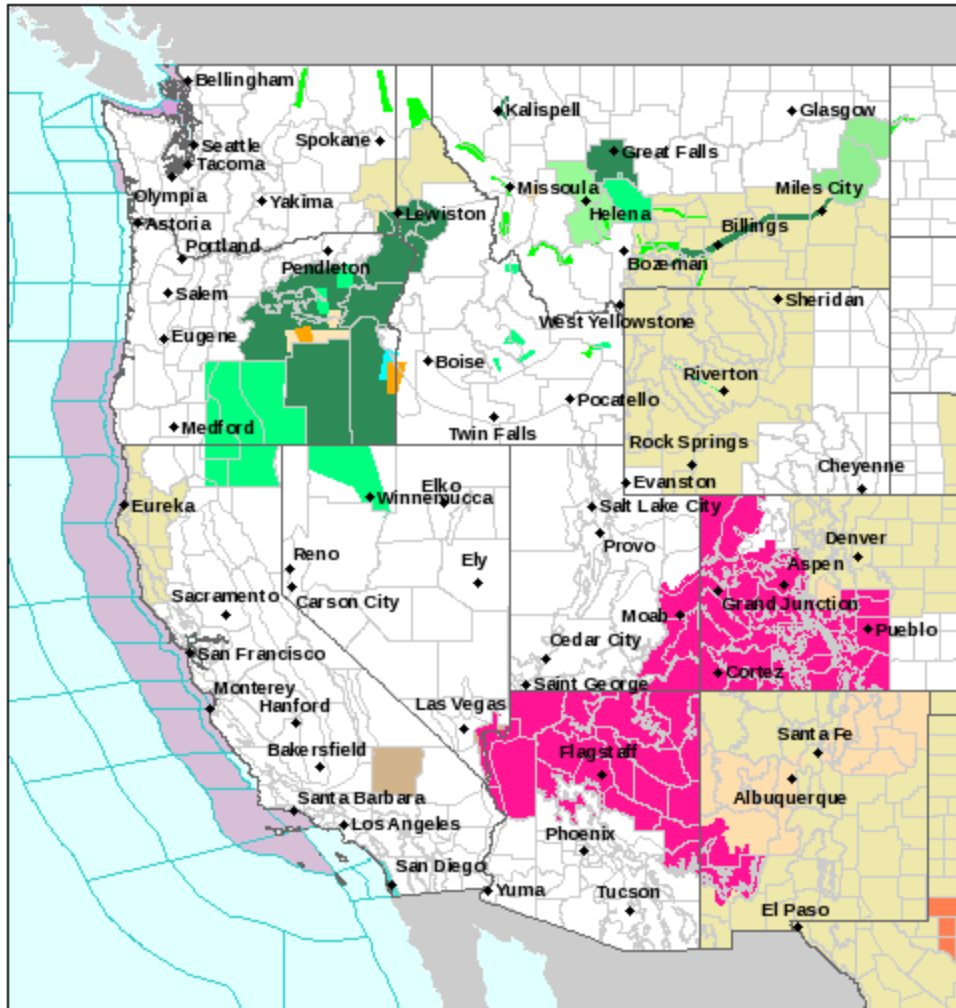

The drying and warming trend will spread east on Sunday. Temperatures will be 5-10 degrees above normal and NW-NE surface winds will gust to 25-30 mph, especially in wind-prone areas in the Sacramento Valley and surrounding foothills. Minimum afternoon relative humidity (RH) readings will be in the teens Sunday. The northerly downslope surface wind pattern will continue through Tuesday morning. Monday will be the peak of the hot and dry weather with temperatures 10-15 degrees above normal and minimum RH of 10-20%. By Tuesday afternoon, conditions will begin to moderate a bit as a weak trough approaches. The trough has the potential to produce near normal temperatures with a return of daily afternoon showers and thunderstorms in the mountains through next Thursday.

## **SOUTHERN CALIFORNIA**

Scattered showers and thunderstorms will continue over the Central and Eastern Sierra through Saturday afternoon as the low moves into Nevada, but the showers and thunderstorms will end across the rest of Central California by this evening. The marine layer will remain deep over Southern California, with areas of light rain in the mornings both today and Saturday. There will be little or no afternoon clearing from the marine layer across Southern California today and Saturday. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert areas through Saturday evening. Temperatures will be well below normal through Saturday, with 50s to low 60s across the mountains and mid 60s to mid 70s in the valleys. The low pressure area will weaken and move off to the northeast as a ridge of high pressure builds in from the southwest bringing a warming and drying trend Sunday through early next week. Temperatures will be near to a little above normal Monday and Tuesday. There will be isolated afternoon showers and thunderstorms over the Central and Eastern Sierra Sunday and then no shower or thunderstorm activity is anticipated across the region Monday. The marine layer will remain deep, but there will be good afternoon clearing Sunday. The marine layer will be much shallower Monday and Tuesday, with morning low clouds and fog expected only over the coastal areas. Winds will be light Sunday through early next week. A Pacific trough will drop down the West Coast bringing significant cooling and an increase in humidity Wednesday through the end of next week. This trough will also bring isolated afternoon showers and thunderstorms to the Sierra Tuesday through Friday. The marine layer will become deep once again, with morning low clouds and fog making it over the lower coastal mountain slopes by Thursday. Westerly afternoon winds of 20 to 30 mph with gusts to 50 mph will once again surface over the wind prone mountain and deserts areas Wednesday through Friday.
